Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
   for (i = 1; i <= num;++i)
   {
    if (num % i== 0)
       {
         printf("%d ", i);
       }
    }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

void factor(int n){
    int counter = 0;
    for(int i=1; i<=n; i++){
        counter++;
        if(n%i == 0){
          //  printf("%d",i);
            counter += 2;
        }
        else{
            counter++;
        }
    }
    counter++;
    printf("%d",counter);
}

int main(){
    int n;
    scanf("%d",&n);
    factor(n);
    return 0;
}
```

	Input	Expected	Got	
✔	12	31	31	✔
✔	25	54	54	✔
✔	4	12	12	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
